

# T40B

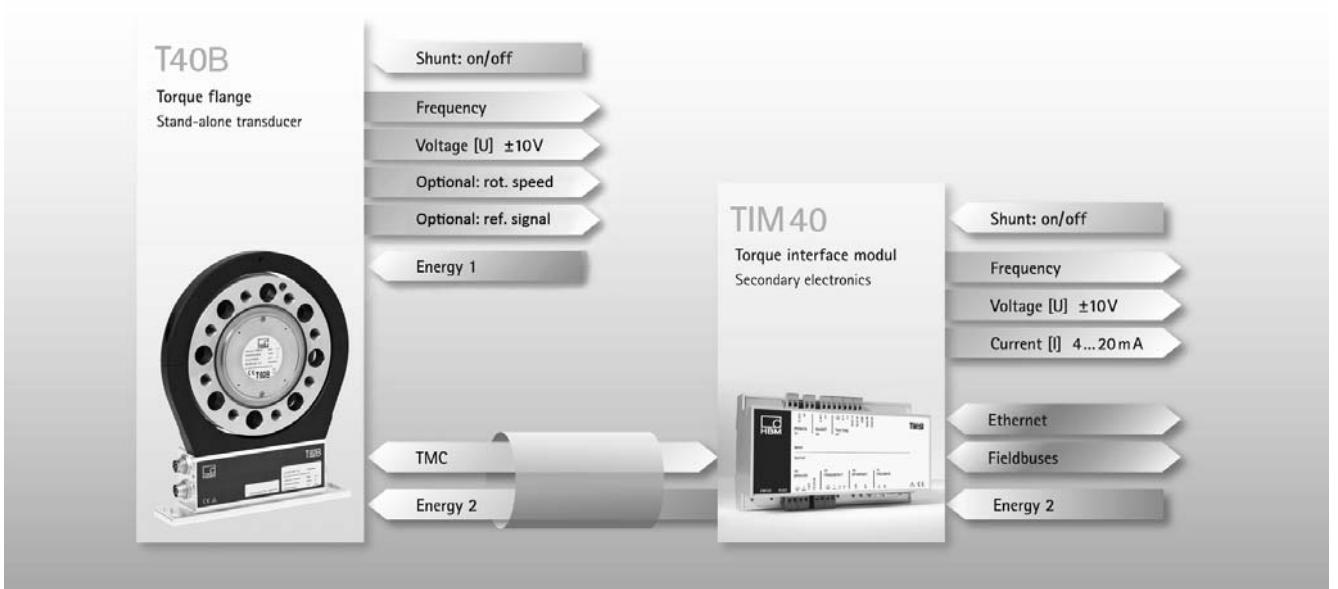

## Torque flange

### Special features

- Nominal (rated) torques 50 N·m, 100 N·m, 200 N·m, 500 N·m, 1 kN·m, 2 kN·m, 3 kN·m, 5 kN·m and 10 kN·m
- Nominal (rated) speeds of 10 000 rpm to 20 000 rpm
- Accuracy class 0.05
- Large measurement frequency range up to 6 kHz (-3 dB)
- Digital transmission of measured values
- Compact design
- Low rotor weights and mass moments of inertia
- Optional: Speed measuring system, reference pulse

### Overall concept

## Specifications

Type	T40B																					
Accuracy class	0.05																					
<b>Torque measuring system</b>																						
<b>Nominal (rated) torque <math>M_{\text{nom}}</math></b>	N·m	50	100	200	500																	
	kN·m					1	2	3	5	10												
<b>Nominal (rated) speed</b>	rpm	20 000				15 000		12 000		10 000												
<b>Linearity error including hysteresis, related to the nominal (rated) sensitivity</b>	%	$< \pm 0.03$																				
Frequency output	%	$< \pm 0.03$																				
Voltage output	%	$< \pm 0.03$																				
<b>Relative standard deviation of repeatability</b> per DIN 1319, related to the variation of the output signal	%	$< \pm 0.03$																				
Frequency output	%	$< \pm 0.03$																				
Voltage output	%	$< \pm 0.03$																				
<b>Effect of temperature per 10 K in the nominal (rated) temperature range</b>	%																					
<b>on the output signal, related to the actual value of the signal spread</b>	%	$\pm 0.1$	$\pm 0.05$																			
Frequency output	%	$\pm 0.4$	$\pm 0.2$																			
<b>on the zero signal, related to the nominal (rated) sensitivity</b>	%	$\pm 0.1$	$\pm 0.05$																			
Frequency output	%	$\pm 0.2$	$\pm 0.1$																			
<b>Nominal (rated) sensitivity</b> (spread between torque = zero and nominal (rated) torque)	kHz	5/30/120																				
Frequency output 10 kHz / 60 kHz / 240 kHz	V	10																				
Voltage output	%	$\pm 0.1$																				
<b>Sensitivity tolerance</b> (deviation of the actual output quantity at $M_{\text{nom}}$ from the nominal (rated) sensitivity)																						
<b>Output signal at torque = zero</b>	kHz	10/60/240																				
Frequency output	V	0																				
<b>Nominal output signal</b>																						
Frequency output	kHz	15 <sup>1)</sup> / 90 <sup>2)</sup> / 360 <sup>3)</sup> (5 V symmetrical <sup>4)</sup> )																				
at positive nominal (rated) torque	kHz	5 <sup>1)</sup> / 30 <sup>2)</sup> / 120 <sup>3)</sup> (5 V symmetrical <sup>4)</sup> )																				
at negative nominal (rated) torque																						
Voltage output	V	$+10$																				
at positive nominal (rated) torque	V	$-10$																				
<b>Load resistance</b>	kΩ	$\geq 2$																				
Frequency output	kΩ	$\geq 10$																				
<b>Longterm drift over 48 h at reference temperature</b>																						
Frequency output	%	$< \pm 0.06$	$< \pm 0.03$																			
Voltage output	%	$< \pm 0.06$	$< \pm 0.03$																			
<b>Measurement frequency range, -3 dB</b>	kHz	1 <sup>1)</sup> / 3 <sup>2)</sup> / 6 <sup>3)</sup>																				
<b>Group delay</b>	μs	< 400 <sup>1)</sup> / < 220 <sup>2)</sup> / < 150 <sup>3)</sup>																				
<b>Residual ripple</b>	mV	$< 40$																				
<b>Maximum control range<sup>6)</sup></b>	kHz	2.5 ... 17.5 <sup>1)</sup> / 15 ... 105 <sup>2)</sup> / 60 ... 420 <sup>3)</sup>																				
Frequency output	V	$-12 \dots +12$																				

1) Option 5,  $10 \pm 5$  kHz (code SU2)

2) Option 5,  $60 \pm 30$  kHz (code DU2)

3) Option 5,  $240 \pm 120$  kHz (code HU2)

4) RS-422 complementary signals, note termination resistor.

5) Signal frequency range 0.1 to 10 kHz

6) Output signal range in which there is a repeatable correlation between torque and output signal.

## Specifications (continued)

Nominal (rated) torque $M_{\text{nom}}$	N·m	50	100	200	500	1	2	3	5	10
	kN·m									
<b>Energy supply</b>										
Nominal (rated) supply voltage (separated extralow DC voltage)	V					18 ... 30				
Current consumption in measuring mode	A					< 1				
Current consumption in startup mode	A					< 4 (typ. 2) 50 $\mu\text{s}$				
Nominal (rated) power consumption	W					< 10				
Maximum cable length	m					50				
<b>Shunt signal</b>										
<b>Tolerance of the shunt signal, related to <math>M_{\text{nom}}</math></b>	%					approx. 50 % of $M_{\text{nom}}$				
Nominal (rated) trigger voltage	V					< $\pm 0.05$				
Trigger voltage limit	V					5				
Shunt signal ON	V					36				
Shunt signal OFF	V					min. > 2.5				
						max. < 0.7				
<b>Speed measuring system</b>										
<b>Measurement system</b>						Magnetic, via AMR sensor (Anisotropic Resistive Effect) and magnetized plastic ring with embedded steel ring				
<b>Magnetic poles</b>						72	86	108	126	156
<b>Maximum position deviation of the poles</b>							50 angular seconds			
<b>Output signal</b>	V						5 V symmetrical (RS-422); 2 square wave signals approx. 90° phase shifted			
<b>Pulses per revolution</b>							1024			
<b>Minimum speed for sufficient pulse stability</b>	rpm						0			
<b>Pulse tolerance <sup>7)</sup></b>	Deg.						< $\pm 0.05$			
<b>Maximum permissible output frequency</b>	kHz						420			
<b>Group delay</b>	$\mu\text{s}$						< 150			
<b>Radial nominal distance between sensor head and magnetic ring (mechanical distance)</b>	mm						1.6			
<b>Working distance range between sensor head and magnetic ring</b>	mm						0.4 ... 2.5			
<b>Max. permissible axial displacement of the rotor to the stator <sup>8)</sup></b>	mm						$\pm 1.5$			
<b>Hysteresis of reversal in the case of relative vibrations between the rotor and the stator</b>										
Torsional vibration of the rotor	Deg.						< approx. 0.2			
Horizontal stator vibration displacement	mm						< approx. 0.5			
<b>Magnetic loading limit</b>										
Remanent flux density	mT						> 100			
Coercive field strength	kA/m						> 100			
<b>Permissible magnetic field strength for signal deviations</b>	kA/m						< 0.1			
<b>Load resistance <sup>9)</sup></b>	$\text{k}\Omega$						$\geq 2$			
<b>Reference pulse measuring system (0 index)</b>										
<b>Measurement system</b>						Magnetic, with Hall sensor and magnet				
<b>Output signal</b>	V					5V symmetric (RS 422)				
<b>Pulses per revolution</b>							1			
<b>Minimum speed for sufficient pulse stability</b>	rpm						2			
<b>Pulse width, approx.</b>	Deg.						0.088			
<b>Pulse tolerance <sup>7)</sup></b>	Deg.						< $\pm 0.05$			
<b>Group delay</b>	$\mu\text{s}$						< 150			
<b>Axial nominal distance between sensor head and magnetic ring (mechanical distance)</b>	mm						2.0			
<b>Working distance range between sensor head and magnetic ring</b>	mm						0.4 ... 2.5			
<b>Max. permissible axial displacement of the rotor to the stator <sup>8)</sup></b>	mm						$\pm 1.5$			

7) At nominal (rated) conditions.

8) The data refers only to a central axial alignment. Deviations lead to a change in pulse tolerance.

9) Note the termination resistances as per RS-422.

Nominal (rated) torque $M_{\text{nom}}$	N·m	50	100	200	500	1	2	3	5	10
	kN·m									
<b>General information</b>										
<b>EMC</b>	-									
<b>Emission</b> (per EN 61326-1, Section 7)										
RFI field strength										
<b>Immunity from interference</b> (EN 61326-1, Table 2)										
Electromagnetic field (AM)	V/m					10				
Magnetic field	A/m					100				
Electrostatic discharge (ESD)										
Contact discharge	kV					4				
Air discharge	kV					8				
Rapid transients (burst)	kV					1				
Impulse voltages (surge)	kV					1				
Conducted interference (AM)	V					10				
<b>Degree of protection per EN 60529</b>										
<b>Reference temperature</b>	°C					23				
<b>Nominal (rated) temperature range</b>	°C					+10 ... +70				
<b>Operating temperature range</b>	°C					-20 ... +85				
<b>Storage temperature range</b>	°C					-40 ... +85				
<b>Mechanical shock per EN 60068-2-27<sup>10)</sup></b>										
Number	n					1000				
Duration	ms					3				
Acceleration (half sine)	m/s <sup>2</sup>					650				
<b>Vibrational stress in 3 directions per EN 60068-2-6<sup>10)</sup></b>										
Frequency range	Hz					10 ... 2000				
Duration	h					2.5				
Acceleration (amplitude)	m/s <sup>2</sup>					200				
<b>Load limits<sup>11)</sup></b>										
<b>Limit torque, related to <math>M_{\text{nom}}^{12)}</math></b>	%	400				200				
<b>Breaking torque, related to <math>M_{\text{nom}}^{12})</math></b>	%	800				> 400				
<b>Longitudinal limit force<sup>13)</sup></b>	kN	5	5	10	13	19	30	35	60	80
<b>Lateral limit force<sup>13)</sup></b>	kN	1	1	2	4	5	9	10	12	18
<b>Limit bending moment<sup>13)</sup></b>	N·m	50	50	100	200	220	560	600	800	1200
<b>Oscillation width per DIN 50100 (peak-to-peak)<sup>14)</sup></b>	N·m	200	200	400	1000	2000	4000	4800	8000	16000

10) The antenna ring and connection plug must be fixed.

11) Each type of irregular stress (bending moment, lateral or longitudinal force, exceeding nominal (rated) torque), can only be permitted up to its specified load limit, provided none of the others can occur at the same time. If this condition is not met, the limit values must be reduced. If 30% of the limit bending moment and lateral limit force occur at the same time, only 40% of the longitudinal limit force is permissible and the nominal (rated) torque must not be exceeded. The permissible bending moments, longitudinal forces and lateral forces can affect the measurement result by approx. 0.3 % of the nominal (rated) torque. The load limits only apply for the nominal (rated) temperature range. At temperatures < 10 °C, load limits are expected to reduce by up to 30%, because there is an increased reduction in toughness as temperatures fall.

12) With a static loading.

13) Static and dynamic.

14) The nominal (rated) torque must not be exceeded.

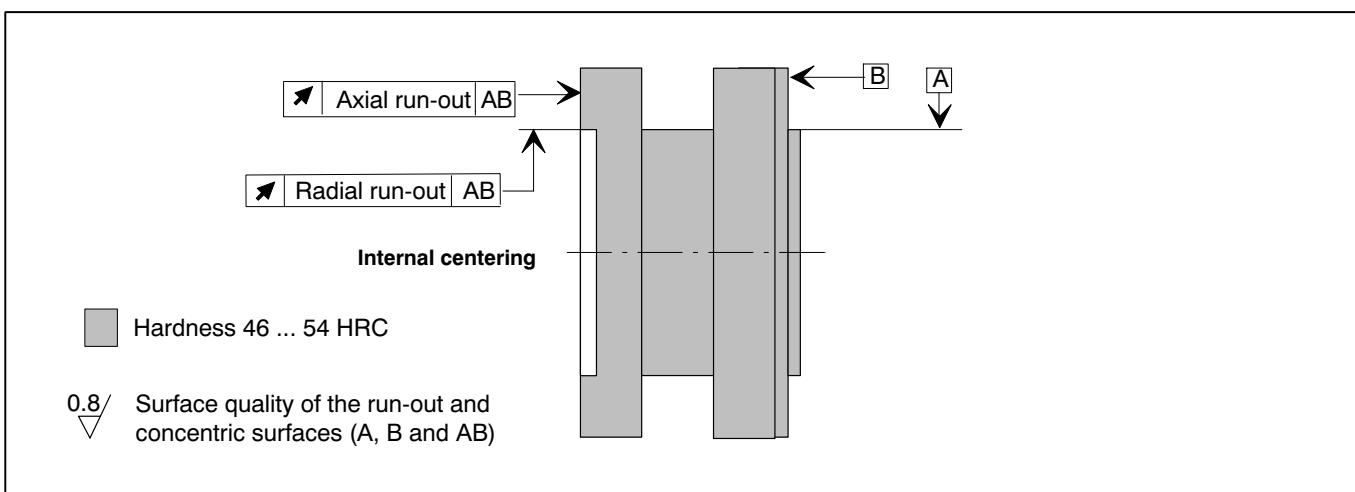

## Specifications (continued)

Nominal (rated) torque $M_{\text{nom}}$	N·m	50	100	200	500					
	kN·m					1	2	3	5	10
<b>Mechanical values</b>										
Torsional stiffness $c_T$	kN·m/rad	180	180	360	745	1165	2515	3210	5565	14335
Torsion angle at $M_{\text{nom}}$	Deg.	0.016	0.032	0.032	0.038	0.049	0.046	0.054	0.051	0.040
Stiffness in the axial direction $c_a$	kN/mm	285	285	540	450	580	540	570	760	960
Stiffness in the radial direction $c_r$	kN/mm	160	160	315	560	860	1365	1680	2080	2940
Stiffness during the bending moment round a radial axis $c_b$	kN·m/deg.	1.9	1.9	3.6	4.2	5.9	9	9.3	20.2	45.5
Maximum deflection at longitudinal force limit	mm	< 0.04			< 0.05		< 0.06	< 0.08	< 0.09	
Additional max. radial run-out deviation at lateral limit force	mm	< 0.02								
Additional plumb/parallel deviation at bending limit moment (at $\varnothing d_B$ )	mm	< 0.06		< 0.11	< 0.09	< 0.18	< 0.19	< 0.14	< 0.12	
Balance quality level per DIN ISO 1940		G 2.5								
Max. limits for relative shaft vibration (peak-to-peak) <sup>15)</sup> Undulations in area of connection flange, based on ISO 7919-3	$\mu\text{m}$									
Normal operation (continuous operation)	$\mu\text{m}$	$s_{(p-p)} = \frac{9000}{\sqrt{n}} \quad (\text{n in rpm}^{-1})$								
Start and stop operation/resonance ranges (temporary)	$\mu\text{m}$	$s_{(p-p)} = \frac{13200}{\sqrt{n}} \quad (\text{n in rpm}^{-1})$								
Mass moment of inertia of the rotor $J_v$	kg·m <sup>2</sup>	0.0010	0.0010	0.0017	0.0039	0.0128	0.0292	0.0771		
	kg·m <sup>2</sup>	0.0015	0.0015	0.0022	0.0048	0.0145	0.0146	0.0333	0.0872	
Proportional mass moment of inertia for the transmitter side (side of the flange with external centering)										
without speed measuring system	% of $J_v$	68	68	62	59	54	53	54		
with a magnetic speed measuring system	% of $J_v$	44	44	48	48	48	47	48		
Max. permissible static eccentricity of the rotor (radially) to the center point of the stator	mm	$\pm 2$								
without speed measuring system	mm	$\pm 2$								
Permissible axial displacement between rotor and stator <sup>16)</sup>	mm	$\pm 2$								
without speed measuring system	mm	$\pm 2$								
Weight	kg	0.7	0.7	1.1	1.9	3.8	3.9	6.5	10.9	
Rotor without speed measuring system	kg	0.8	0.8	1.3	2.1	4.1	4.1	6.9	11.7	
Rotor with magnetic speed measuring system	kg	1.1	1.1	1.1	1.1	1.1	1.1	1.1	1.2	1.3
Stator	kg									

<sup>15)</sup> The influence of radial run-out deviations, eccentricity, defects of form, notches, marks, local residual magnetism, structural variations or material anomalies needs to be taken into account and isolated from the actual wave oscillation.

<sup>16)</sup> Above the nominal (rated) temperature range:  $\pm 1.5$  mm.

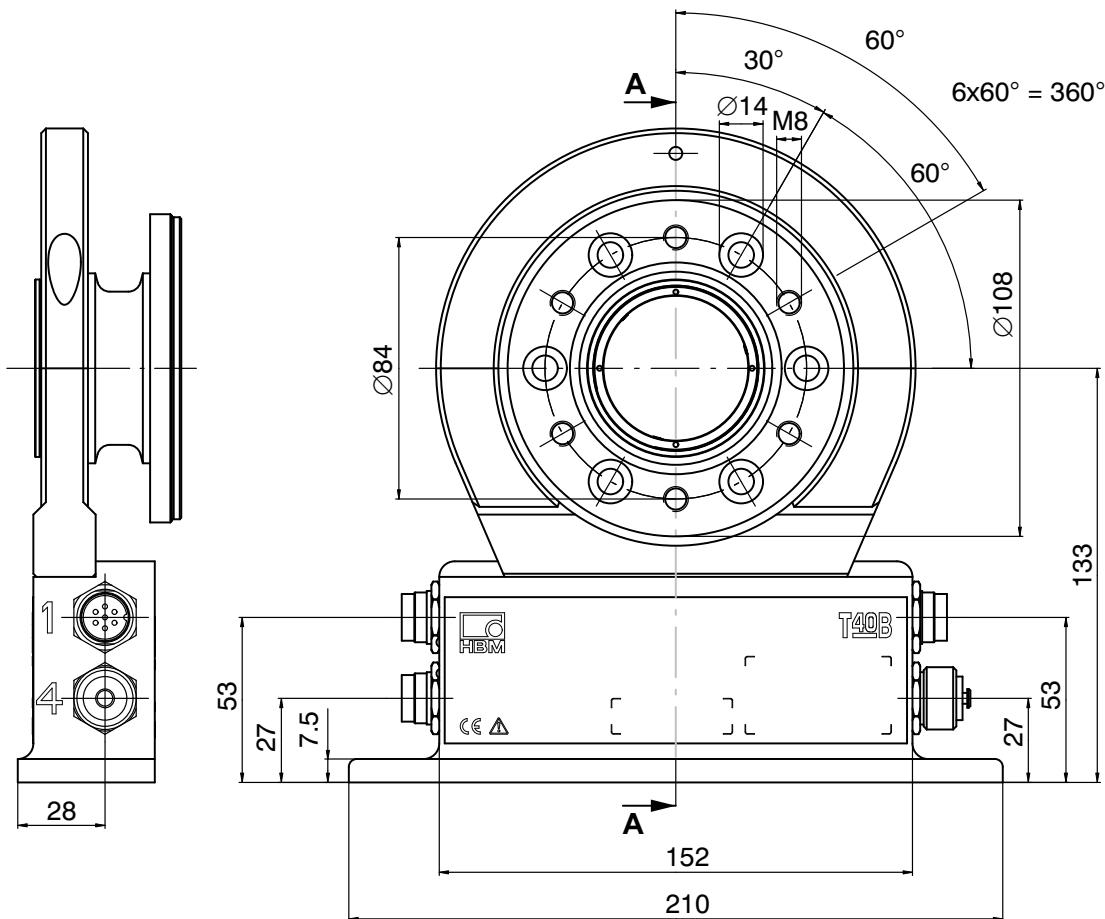

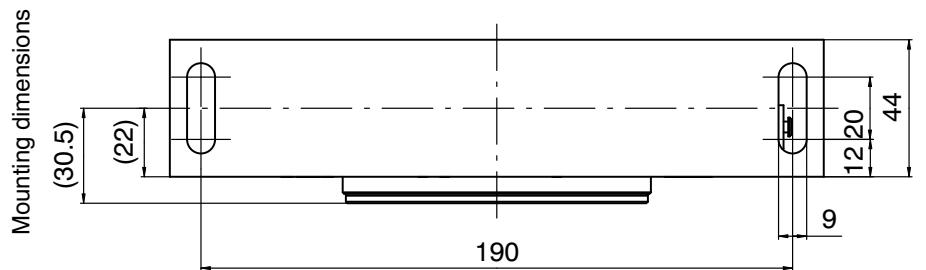

## Radial and axial run-out tolerances

Measuring range (N·m)	Axial run-out tolerance (mm)	Radial run-out tolerance (mm)
50	0.01	0.01
100	0.01	0.01
200	0.01	0.01
500	0.01	0.01
